

Example document. ETI360 does not write RAMS. This example shows the structured risk information ETI360 prepares — hazards, controls, and activity groupings — which the school or provider uses to author and sign its own RAMS.

# Definitions & Sign-off

Cherry Blossom Tokyo

### Likelihood

| Label          | Definition                                               |
|----------------|----------------------------------------------------------|
| Rare           | Has not occurred in comparable trips; highly exceptional |
| Unlikely       | Possible but not expected under typical conditions       |
| Possible       | Has occurred previously in similar contexts              |
| Likely         | Occurs regularly in comparable environments              |
| Almost Certain | Expected to occur in the absence of controls             |

### Severity

| Label         | Definition                                        |
|---------------|---------------------------------------------------|
| Insignificant | No injury or first aid only                       |
| Minor         | Minor injury; no lasting impact                   |
| Moderate      | Medical treatment indicated; temporary limitation |
| Major         | Serious injury; significant impairment            |
| Catastrophic  | Fatality or permanent life-altering injury        |

### Risk Bands (Likelihood × Severity)

| Score   | Band     | Colour | Typical Implication                                                                                       |
|---------|----------|--------|-----------------------------------------------------------------------------------------------------------|
| 1 – 4   | Low      | Green  | Routine controls are typically sufficient. Standard operating procedures apply.                           |
| 5 – 9   | Moderate | Amber  | A control review is common at this band. Enhanced supervision or procedural adjustments may follow.       |
| 10 – 16 | High     | Orange | Senior sign-off is typical at this level, with additional controls considered before activities proceed.  |
| 17 – 25 | Extreme  | Red    | This band would typically prompt the highest level of review, including a decision on whether to proceed. |

Scales reference ISO 31000:2018, ISO 31030:2021, and BS 8848:2014.

### Review & Sign-off

ETI360 prepared and organized this working document, one per activity group, from the trip's itinerary, the provider's documentation, and the school's policies, so that the risk assessment and RAMS are simpler to complete. The school or trip provider reviews it, completes and amends it as necessary, and approves the final risk assessment and RAMS. ETI360 does not approve or certify them. Sign-off records that review; the decision to proceed, and the duty of care, remain with the school.

| Wet footway fall near Shibuya Crossing                                       |                      | Environment                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | March rain on the polished stone and painted crossing surfaces at Shibuya creates genuinely poor grip under foot traffic. The crossing's compressed pedestrian flow means a fall has a secondary collision risk uncommon in typical urban environments. |                        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| Consequence                                                                  | Inherent Risk        | Controls & Mitigations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                                                                                                                                                                                                                                                         | Residual Risk          | Emergency Actions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| Student separated in crowd crush                                    |                        | People                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Shibuya Crossing handles up to 3,000 pedestrians per signal cycle. At peak times — particularly weekend afternoons — crowd density makes group separation difficult to reverse quickly, and the crossing infrastructure offers no natural regrouping point. |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
